Data Management on Microsoft Azure with StoneFly SCVM™

SCVM™ - Storage Concentrator Virtual Machine

Simplifying Data Organization for ever-growing Data Workloads

StoneFly SCVM™ delivers a fully featured, enterprise level cloud NAS filer that simplifies data management and control in Microsoft Azure cloud. With SCVM™ enterprise IT environments can effectively leverage their data center to embrace modern practices knowing that their data is highly available, secure, protected and well managed.

Integrate SCVM™ with your existing infrastructure to support hybrid, and new SaaS applications and business continuity scenarios. SCVM™ also simplifies migration (lift and shift) of your applications to the Azure cloud without any rewriting requirements.

Setup StoneFly SCVM™ today and add value to your data with effective yet simple data management of your existing applications and data in tandem with modern SaaS solutions to Azure.

1 Easily deploy and manage continuously growing workloads.

2 Integrate data protection techniques like backup and disaster recovery efficiently and cost effectively.

3 Effectively and seamlessly address cloud specific concerns around data migration and management.

StoneFly SCVM™ empowers over 500,000 Businesses around the globe.

One Solution to Control & Manage all your Enterprise Data

SCVM™ delivers enterprise level data services for efficient data management in Azure. SCVM™ also facilitates file server consolidation and on-premises to cloud migration. IT environments can effectively leverage SCVM™ to manage data across multiple clouds.

Optimize your business with seamless cloud integration

IT environments can setup a full featured enterprise-class cloud NAS for primary data and secondary backup data easily and cost effectively. SCVM™ also facilitates flexibility by enabling IT environments to customize resources on a project-by-project basis; while maintaining full control.

Extend Native Storage Abilities of Microsoft Azure

Not only does SCVM™ facilitate simplified management and control of resources deployed in Azure. IT environments can also avoid sharing of resources by tapping into StoneFly private cloud using SCVM's cloud connect services.

STONEFLY

Data Management on Microsoft Azure with StoneFly SCVM™

SCVM™ - Storage Concentrator Virtual Machine

With StoneFly SCVM™, IT environments can deploy:

NAS in the Cloud

SAN in the Cloud (Cloud Block Storage)

NAS + SAN in the Cloud

Data Tiering in Microsoft Azure

SCVM™ delivers cloud connect services enabling IT environments to leverage their existing legacy infrastructure and integrate cloud technology and data tiering.

IT environments can opt to keep their frequently accessed data on-premises while migrating less frequently accessed data to the cloud to reduce costs and simplify management using SCVM™.

With data tiering, SCVM™ facilitates data backup and archiving in Microsoft Azure cloud. IT environments can not only manage their data efficiently but they can also protect it and archive it using StoneFly and Azure's reliable data security services.

SCVM™ delivers a range of enterprise level Data Services, such as:

Deduplication

Thin Provisioning

Scalability

Erasure Coding
